"Server-Side Encryption with Customer Master Keys (CMKs) Stored
in AWS Key Management Service (SSE-KMS) is similar to SSE-S3,
but with some additional benefits and charges for using this
service. There are separate permissions for the use of a CMK
that provides added protection against unauthorized access of
your objects in Amazon S3. SSE-KMS also provides you with an
audit trail that shows when your CMK was used and by whom."
Server-Side Encryption: Using SSE-KMS You can protect data at
rest in Amazon S3 by using three different modes of server-side
encryption: SSE-S3, SSE-C, or SSE-KMS.
SSE-S3 requires that Amazon S3 manage the data and master
encryption keys. For more information about SSE-S3, see
Protecting Data Using Server-Side Encryption with Amazon
S3-Managed Encryption Keys (SSE-S3).
SSE-C requires that you manage the encryption key. For more
information about SSE-C, see Protecting Data Using Server-Side
Encryption with Customer-Provided Encryption Keys (SSE-C).
SSE-KMS requires that AWS manage the data key but you manage
the customer master key (CMK) in AWS KMS.
The remainder of this topic discusses how to protect data by
using server-side encryption with AWS KMS-managed keys
(SSE-KMS).
You can request encryption and select a CMK by using the Amazon
S3 console or API. In the console, check the appropriate box to
perform encryption and select your CMK from the list. For the
Amazon S3 API, specify encryption and choose your CMK by
setting the appropriate headers in a GET or PUT request.
