A large database was being restored for much of the day, which could be causing issues.

You want to write a query of the system views that will report the following:

Number of users that have a connection to the server

Whether a user's connection is active

What queries are being executed

Whether the database restore is still executing and, if it is, what percentage of the restore is complete.

Explanation/Reference:

Explanation:

- sys.dm_exec_requests

Returns information about each request that is executing within SQL Server.

- sys.dm_exec_sessions

Returns one row per authenticated session on SQL Server.

sys.dm_exec_sessions is a serverscope view that shows information about all active user connections and internal tasks. This information includes client version, client program name, client login time, login user, current session setting, and more.

- sys.dm_exec_query_text

Returns the text of the SQL batch that is identified by the specified sql_handle.

Incorrect Answers:

- sys.dm_exec_query_stats Returns aggregate performance statistics for cached query plans in SQL Server.

The view contains one row per query statement within the cached plan, and the lifetime of the rows are tied to the plan itself.

- sys.objects

Contains a row for each user-defined, schema-scoped object that is created within a database.
