Take this time to prepare for your 250-571 exam, not only to pass, but as preparation for the industry that you're heading in to.

#### **NEW QUESTION: 1**

Note: This question is part of a series of question that use the same set of answer choices. Each answer choice may be used once, more than once, or not at all.

Your network contains an Active Directory domain. All domain controllers run Windows Server 2008 R2.

You need to receive a notification when more than 100 Active Directory objects are deleted per second.

What should you do?

- A. Run the ntdsutil.exe command.
- B. Run the dsamain.exe command.
- C. Configure the Active Directory Diagnostics Data Collector Set (DCS).
- D. Run the eventcreate.exe command.
- E. Run the dsquery.exe command.
- F. Create custom views from Event Viewer.
- G. Run the Get-ADForest cmdlet.
- H. Create a Data Collector Set (DCS).
- I. Configure subscriptions from Event Viewer.
- J. Run the repadmin.exe command.

**Answer: H**

Explanation:

(This one may also show up with a different # of objects but answer is always the same)

We basically need to setup a performance alert. We would not set one up on the AD DCS, as it does not provide information about deleted objects in AD. Rather, we would have to create a custom DCS with the appropriate performance counter.

From Microsoft:

You can configure alerts to notify you when certain events occur or when certain performance thresholds are reached. You can send these alerts as network messages and as events that are logged in the application event log. You can also configure alerts to start applications and performance logs.

To configure an alert, follow these steps:

1. In Performance Monitor, under the Data Collector Sets node, right-click the User-Defined node in the left pane, point to New, and then choose Data Collector Set. (...)

**NEW QUESTION: 2**

- A. Option D
- B. Option B
- C. Option C
- D. Option A

**Answer: B**

**NEW QUESTION: 3**

To what does logon abuse refer?

- A. Nonbusiness or personal use of the Internet
- B. Intrusions via dial-up or asynchronous external network

connections

C. Breaking into a network primarily from an external source

D. Legitimate users accessing networked services that would normally be restricted to them

**Answer: D**

Explanation:

The correct answer is "Legitimate users accessing networked services that would normally be restricted to them". Logon abuse entails an otherwise proper user attempting to access areas of the network that are deemed offlimits. Answer "Breaking into a network primarily from an external source" is called network intrusion, and d refers to backdoor remote access.
