Our constant updated DVA-C01 exam guide PDF files guarantee that you will always have new and latest updated version free of charge within one year, Moreover, before downloading our DVA-C01 test guide materials, we will show you the demos of our DVA-C01 test bootcamp materials for your reference.

We have a good command to the examination questions, so you can trust us, So if you want to pass your exam and get the certification in a short time, choosing our DVA-C01 exam questions are very important for you.

To ensure your eligibility to take this exam, [QSBA2021 Valid Dumps Ebook](#) you should have intermediate-level knowledge and practical skills in monitoring and securing hybrid environments, including [DVA-C01](#) cloud, mobile, and IoT as well as trouble-shooting Cybersecurity issues.

Our DVA-C01 reliable test questions will be wise choice for wise people who have great and lofty aspirations, You can be successful as long as you make the right choices.

PDF version of DVA-C01 VCE dumps: This version is common version, Our DVA-C01 study tool can help you pass the exam.

NEW QUESTION: 1

You are a Dynamics 365 for Sales administrator. You have an interactive experience leads dashboard.

You need to create a filtered view of the dashboard.

What should you do? To answer, select the appropriate options in the answer area.

NOTE:Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION: 2

A customer has an E880. They are considering using Power Enterprise Pools.

What is the maximum percentage of installed memory that can have mobile activations?

- A. 100%
- B. 75%
- C. 25%
- D. 50%

Answer: B

Explanation:

Reference:

<http://www.redbooks.ibm.com/abstracts/tips1169.html?Open>

NEW QUESTION: 3

Amazon EC2 instances, including Amazon Machine Images (AMIs), are stored in Amazon S3 buckets. You can use the Amazon S3 console to view the details of your AMIs.

Which of the following is a valid Amazon S3 bucket name? (Select the best answer.)

- A. my-bucket-123
- B. my_bucket_123
- C. my-bucket.123
- D. my_bucket.123

Amazon S3 bucket names must be lowercase letters, numbers, hyphens, and underscores. They must start and end with a letter or number. They cannot contain spaces or special characters. They cannot be a reserved name or a name that is too long (more than 63 characters).

Option A is valid because it follows all the rules: it is lowercase, contains only allowed characters, and is not a reserved name.

Option B is invalid because it contains an underscore, which is not allowed in bucket names.

Option C is invalid because it contains a period, which is not allowed in bucket names.

Answer: C

NEW QUESTION: 4

Case Study

This is a case study. Case studies are not limited separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that

you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section. To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Tailspin Toys manufactures and sells toys and games. The company also resells board games. The new chief executive officer (CEO) recently launched an effort to update the company's information technology (IT) infrastructure. The CEO wants a blog site to provide updates in plain text about the progress of company projects and the overall health of the company to employees. Content from this site will be used to populate some content on the internet-facing site. You hire a consultant to design and deploy a SharePoint farm. The company plans to use the farm to create internal collaboration sites, an e-commerce site, and a place to display public announcements. The following diagram shows the topology of the SharePoint farm:

Requirements

General

You must create a separate site collection for each department. You must base each site collection on the Team site template. The direct URL for each site collection must use the following format: `http:// department.tailspin.com`.

You must place the site collections for all departments in the same web application, if possible. You must place the site collections for departments that have unique requirements in separate web applications.

Business continuity

You identify the following requirements related to continuity of the business:

All SharePoint services must be highly available.

The SharePoint environment must be able to withstand the failure of a single system without affecting

accessibility.

You must monitor the SharePoint environment to ensure that systems are available and that response times meet service level agreements (SLAs). In the event the times are not within the required thresholds, the system must alert SharePoint administrators. You must create a site that allows department managers to view the performance data that has been collected. The use of additional monitoring software will be permitted where it can be justified.

Governance and security

Governance requirements

Marketing department employees may create team sites. All other sites must be created by members of

the information technology (IT) administration staff.

You must handle requests for new sites by using a Help Desk site on SharePoint.

The corporate taxonomy must be managed by the SharePoint administrative staff. Users must not be

allowed to create their own information architecture.

Exceptions to this requirement will be handled on a case by case basis.

All information in SharePoint must be consistently identified and readily accessible by using searches.

Search components must be configured to provide the best search results while minimizing administrative overhead.

Security requirements

Anonymous access is only permitted for Internet-facing sites.

Authentication is required for all sites.

Authentication must occur through the Active Directory Domain Services environment. All custom apps must be installed and managed by the SharePoint administrative staff. Any requests for new apps must be submitted through the Help Desk site.

Hardware and storage

Hardware requirements

You must minimize the number of servers and applications whenever possible. You must only deploy additional servers and applications if the requesting department manager provides the appropriate documentation to support the need.

File storage requirements

Content must not be stored in the perimeter network. All access to SharePoint content from the Internet must be handled through servers in the perimeter network. Human resources (HR) data must be kept separate from all other data.

HR department

The HR manager needs a website to implement time management and leave requests. The HR manager has found an app that will

provide this functionality on a SharePoint independent software vendor website, and would prefer to use this app as opposed to creating a custom in-house app. This app will only need access to data in the HR site collection.

You must create a site for the HR department that allows new employees to read required documents regarding policies and procedures. The site must also provide all employees access to other HR documentation such as the employee handbook, employee leave procedures, and acceptable use guides.

IT department

You must implement a Help Desk website and associated workflows. To create the site, you must access data from a Microsoft Excel workbook into a SQL Server database by using an SQL Server Integration Services (SSIS) package. You must access data from other data sources.

Employees must be able to fill out a help request on the site and then check the status of the request. IT department staff must be able to respond to the requests, update the status of requests, update the status of requests, and close requests. IT department managers must be able to track the status of the requests, and generate reports on the progress of requests.

Marketing department

Collaboration sites

Marketing department employees must be able to create their own collaboration sites in SharePoint. The collaboration sites will be used for new product release discussions and marketing plans related to those new products. The URL for the collaboration sites must use the format: /products/productname.

Custom terms

The marketing department must be able to use custom terms when identifying marketing strategies. Other departments must not be able to use custom terms. This requirement has been approved by management.

Public-facing sites

You must create a site for the marketing department that provides information to potential customers about the current product line and any products in development. The marketing team must be able to access this site by using their mobile devices.

Sales department

The sales manager needs a site to display sales progress data. The site must include KPIs and metrics that are generated by using information from a database stored on a SQL Server. Sales department employees are often away from the office. They must be able to access SharePoint data from external locations and when they work remotely. Sales department employees need a site that customers can access to purchase products and check on the status of orders.

You need to obtain the external data required for the Help Desk website.

What should you use?

A. Microsoft Power BI

B. Business Data Connectivity Services application

C. an Office 365 REST endpoint

D. a Content Query web part

Answer: B
