™ã·<i¼ÿ
```

- A. R3i¼^config-routeri¼%bgp default local-preference 200
- B. R3i¼^config-routeri¼%neighbor 10.1.1.1 weight 200
- C. R4i¼^config-routeri¼%neighbor 10.2.2.2 weight 200
- D. R4i¼^config-routeri¼%bgp default local-preference 200

Answer: D

Explanation:

Explanation

Local preference is an indication to the AS about which path has preference to exit the AS in order to reach a certain network. A path with a higher local preference is preferred. The default value for local preference is 100.

Unlike the weight attribute, which is only relevant to the local router, local preference is an attribute that routers exchange in the same AS. The local preference is set with the "bgp default local-preference value" command.

In this case, both R3 & R4 have exit links but R4 has higher local-preference so R4 will be chosen as the preferred exit point from AS 200.

NEW QUESTION: 4

There is a two-node cluster with Node1 and Node2. An administrator changes filesystem size on Node1 by using the chfs command, and moves resource the group to Node2. The administrator finds the change of filesystem size is recognized on Node2.

Why is the filesystem size change reflected on Node2?

- A. The gsclvmd daemon automatically synchronizes filesystem changes.
- B. A pre-event is defined to get_disk_vg_fs event to reflect filesystem size change.
- C. The shared volume group is re-imported on Node2 by lazy update when moving the resource group.
- D. The filesystem size change is recognized when filesystem is mounted on Node2.

Answer: C
