NEW QUESTION: 2

DRAG DROP

Drag the characteristics of the traditional campus network on the left to the most appropriate hierarchical network layer on the right.

Select and Place:

Answer:

Explanation:

Explanation/Reference:

Explanation:

Access

The most feature-rich part of the campus network

Provides security, QoS, and IP Multicast to the network

Distribution

Routing boundary (Dynamic, summarization, static)

Enforces Policy within the network

Core

High level of availability, scalability, and fast convergence

Provides a limited set of services

Large-Building LANs

Large-building LANs are segmented by floors or departments. The building-access component serves one or more departments or floors. The building-distribution component serves one or more building-access components. Campus and building backbone devices connect the data center, building-distribution components, and the enterprise edge-distribution component. The access layer typically uses Layer 2 switches to contain costs, with more expensive Layer 3 switches in the distribution layer to provide policy enforcement. Current best practice is to also deploy multilayer switches in the campus and building backbone. Cisco Enterprise Architecture Model

Core
