Answer: C

NEW QUESTION: 3

- A. Option A
- B. Option E
- C. Option B
- D. Option C
- E. Option D

Answer: B,D,E

Explanation:

zonep2vchk

- check a global zone's configuration for physical to virtual migration into non-global zone The zonep2vchk utility is used to evaluate a global zone's configuration before the process of physical-to-virtual (p2v) migration into a non-global zone. The p2v process involves archiving a global zone (source), and then installing a non-global zone (target) using that archive Zonep2vchk serves two functions. First, it can be used to report issues on the source which might prevent a successful p2v migration. Second, it can output a template zonecfg, which can be used to assist in configuring the non-global zone target.

Zonep2vchk can be executed on a Solaris 10 or later global zone. To execute on Solaris

10, copy the zonep2vchkutility to the Solaris 10 source global zone.

When run on Solaris 10, a target release of S11 can be specified, which will check for p2v into a Solaris 10 Branded zone.
