NEW QUESTION: 3

CORRECT TEXT

Scenario: A Citrix Administrator must use the Provisioning Services Console to add three additional server OS machines to CCH's environment. The administrator must add the machines to an existing machine catalog named Server 2012 and the machines should be assigned the ServerOS2012 vDisk. The administrator must name the machines AppServer04, AppServer05 and AppServer06, respectively, and the machines should be added to the Server OS Machines OU, with plans to add 20 more server OS machines in the future. Provisioning Services is configured to use Network0 as a streaming network interface card. There is currently one Delivery Controller in the environment named Controller-1. This Delivery Controller is a member of the CCH.com domain.

The username for the hypervisor is root, and the password is Password 1.

Tasks:

1. Create three target devices named AppServer04, AppServer05 and AppServer06, respectively.
2. Ensure the target devices are configured according to the requirements outlined in the scenario.

Answer:

Explanation:

Review the steps and solution in explanation below.

Explanation:

The wizard is run directly from a Provisioning Services Console.

Note: For convenient reuse, the most recently used hypervisor and username will be cached in the registry of the local machine running this instance of the Console. Note: XenServer 5.5 Update 2 hypervisors are not supported in the 5.6.1 Streamed VM Setup Wizard. System Center Virtual Machine Management (SCVMM) servers require PowerShell 2.0 to be installed.

3 VM per the Simulation-

Note: An Active Directory administrator will need to delegate rights to the Provisioning Services Console user to allow Active Directory account creation. Note: The domain and OU default to those of the current user. Note: New computer names to be created are first validated that they do not already exist as computers in Active Directory, VMs, or target devices. If the Import existing accounts is selected: Note: The Required count displays the number of virtual machines previously specified to be created. The Added count displays the number of validated entries added to appear in the list. Note: Clicking Cancel cancels the configuration of any additional machines, and the quantity of successfully configured machines displays under the Progress bar. If the wizard fails or is cancelled in the middle of an operation, any progress made is retained. If

cleanup of existing progress is required, it must be done manually, which includes removing the following:
