NEW QUESTION: 2

How does having an EIGRP feasible successor speed up convergence?

- A. EIGRP sends queries only if there is a feasible successor, which decreases the number of routers that are involved in convergence.
- B. EIGRP sends queries only if there is not a feasible successor, which causes less control traffic to compete with data.
- C. EIGRP preinstalls the feasible successor in the RIB in all cases, which causes traffic to switch more quickly.
- D. EIGRP immediately installs the loop-free alternative path in the RIB.

Answer: D
