AAA new-model enable the AAA access control model.

Access control is the way you control who is allowed access to the network server and what services they are allowed to use once they have access. Authentication, authorization, and accounting (AAA) network security services provide the primary framework through which you set up access control on your router or access server.

- A. IKE enable the AAA access control model. Access control is the way you control who is allowed access to the network server and what services they are allowed to use once they have access. Authentication, authorization, and accounting (AAA) network security services provide the primary framework through which you set up access control on your router or access server.
- B. IKE enable the AAA access control model. Access control is the way you control who is allowed access to the network server and what services they are allowed to use once they have access. Authentication, authorization, and accounting (AAA) network security services provide the primary framework through which you set up access control on your router or access server.
- C. IKE enable the AAA access control model. Access control is the way you control who is allowed access to the network server and what services they are allowed to use once they have access. Authentication, authorization, and accounting (AAA) network security services provide the primary framework through which you set up access control on your router or access server.
- D. IKE enable the AAA access control model. Access control is the way you control who is allowed access to the network server and what services they are allowed to use once they have access. Authentication, authorization, and accounting (AAA) network security services provide the primary framework through which you set up access control on your router or access server.

Answer: D

Explanation:

Explanation

This is the output of the #show crypto isakmp sa command. This command shows the Internet Security Association Management Protocol (ISAKMP) security associations (SAs) built between peers - IPsec Phase1.

MM_NO_STATE means that main mode has failed. QM_IDLE - this is what we want to see.
