NEW QUESTION: 2

A customer has an Oracle RAC environment that requires high availability and disaster recovery in one solution.

Which feature of IBM Spectrum Virtualize addresses these needs?

- A. FlashCopy
- B. Volume Migration
- C. HyperScale
- D. HyperSwap

Answer: A

Explanation:

IBM Spectrum Protect Snapshot uses the FlashCopy or snapshot function of the storage solutions for database cloning. This method eliminates downtime and minimizes the impact on the production database.

After you share the FlashCopy repository, configuration and binary files, an Oracle RAC database clone can be created from every node of the Oracle RAC cluster. IBM Spectrum Protect Snapshot can operate on the clone from all RAC nodes, so that a clone created on one RAC node can be inquired, refreshed, or deleted from any other node within the RAC cluster.

NEW QUESTION: 3

The following SAS program is submitted:

```
%let var = chicago, 1;
data a;
var = 'new york, 2';
newvar = %scan(&var, 2, %str());
```

run;

Which one of the following explains why the program fails to execute?

- A. The %STR() is invalid syntax.
- B. The macro variable VAR does not get created properly.
- C. The %SCAN function does not exist.
- D. The %SCAN function has too many arguments.

Answer: D
