**NEW QUESTION: 2**

Consider an E-pipe service configured with SAP 1/1/1:5 and SAP 1/1/1:6.

If the SAP 1/1/1:5 accepts an ingress frame, which of the following is TRUE?

- A. The frame egresses from 1/1/1:6 with VLAN tag 5.
- B. The frame egresses from 1/1/1:6 with no VLAN tag.
- C. The frame egresses from 1/1/1:6 with an inner VLAN tag and an outer VLAN tag of 6.
- D. The frame egresses from 1/1/1:6 with VLAN tag 6.

**Answer: D**

**NEW QUESTION: 3**

DRAG DROP

You plan to deploy a cloud service named contosoapp. The service includes a web role named contosowebrole. The web role has an endpoint named restrictedEndpoint.

You need to allow access to restricted Endpoint only from your office machine using the IP address 145.34.67.82.

Which values should you use within the service configuration file? To answer, drag the appropriate value to the correct location in the service configuration file. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

**Answer:**

Explanation:

Explanation/Reference:

\* Rule with lower order are applied first.

\* We can selectively permit or deny network traffic (in the management portal or from PowerShell) for a virtual machine input endpoint by creating rules that specify "permit" or "deny". By default, when an endpoint is created, all traffic is permitted to the endpoint. So for that reason, it's important to understand how to create permit/deny rules and place them in the proper order of precedence to gain granular control over the network traffic that you choose to allow to reach the virtual machine endpoint. Note that at the instant you add one or more "permit" ranges, you are denying all other ranges by default. Moving forward from the first permit range, only packets from the permitted IP range will be able to communicate with the virtual machine endpoint.

**NEW QUESTION: 4**

Which of the following models defines the name of the data, data aliases, and description of system data?

- A. Class model
- B. Entity relationship
- C. CRUD matrix
- D. Data dictionary

**Answer: D**
