- A. RP failover
- B. RPFVST+
- C. NSF
- D. BFD

Answer: C

NEW QUESTION: 3

A NAC service has discovered a virus on a client laptop. In which of the following locations would the NAC service place the laptop?

- A. On the quarantine network
- B. On the DMZ network
- C. On the honeypot
- D. On the sandbox network

Answer: A

NEW QUESTION: 4

Which two are characteristics of jitter buffers? (Choose two.)

- A. Jitter buffers are used to change asynchronous packet arrivals into a synchronous stream by turning variable network delays into constant delays at the destination end systems.
- B. The role of the jitter buffer is to queue late packets and reorder out-of-order packets.
- C. The role of the jitter buffer is to balance the delay and the probability of interrupted playout due to late packets.
- D. Jitter buffers are used to change asynchronous packet arrivals into a synchronous stream by queuing packets into constant delays at the sending systems.
- E. Jitter buffers are used to change asynchronous packet arrivals into a synchronous stream by turning variable network delays into constant delays at the sending systems.

Answer: A,C

Explanation:

Explanation

Jitter buffers are used to remove the effects of jitter so that asynchronous packet arrivals are changed to a synchronous stream. The jitter buffer trades off between delay and the probability of interrupted playout because of late packets (discard).
