Which statement is correct about the Edgel device in this scenario?

- D. Edgel must be configured for BGP labeled unicast on its PE1-facing interface.

**Answer: B**

Explanation:

Assumption here that the MPLS backbone network offers EVPN; this is the most fully-featured solution.

This could also be achieved via C; BGP-LU shared with the provider, basically extending MPLS down to the Edgel+2 routers; this is less 'risky' for the MPLS backbone operator. B and D are ignoring EVPN/ VXLAN components and refer to traditional Layer 3 IP routing.
