NEW QUESTION: 3

Ferris Plastics, Inc. is a medium sized company, with an enterprise network (access, distribution and core switches) that provides LAN connectivity from user PCs to corporate servers. The distribution switches are configured to use HSRP to provide a high availability solution.

* DSW1 -primary device for VLAN 101 VLAN 102 and VLAN 105

* DSW2 - primary device for VLAN 103 and VLAN 104

* A failure of GigabitEthernet1/0/1 on primary device should cause the primary device to release its status as the primary device, unless GigabitEthernet1/0/1 on backup device has also failed.

Troubleshooting has identified several issues. Currently all interfaces are up. Using the running configurations and show commands, you have been asked to investigate and respond to the following question.

During routine maintenance, GigabitEthernet1/0/1 on DSW1 was shut down. All other interfaces were up. DSW2 became the active HSRP device for VLAN 101 as desired. However, after GigabitEthernet1/0/1 on DSW1 was reactivated, DSW1 did not become the active router for VLAN 101 as desired. What needs to be done to make the group for VLAN 101 function properly?

- A. In the VLAN 101 HSRP group on DSW1, decrease the priority value to a value that is less than the priority value configured in the VLAN 101 HSRP group on DSW2.
- B. Enable preempt in the VLAN 101 HSRP group on DSW1.
- C. Disable preempt in the VLAN 101 HSRP group on DSW2's.
- D. Decrease the decrement value in the track command for the VLAN 101 HSRP group on all DSWs to a value less than the value in the track command for the VLAN 101 HSRP group on DSW2.

Answer: B

NEW QUESTION: 4

You create a SQL Server 2008 R2 Analysis Services (SSAS) solution.

You are configuring security settings for a new database role with the following requirements:

Only the West member can be viewed by the database role. All other existing members and any newly

added members of the Region attribute will not be visible.

Members in attribute hierarchies that include a

member of the Region attribute remain visible. The members in other attribute hierarchies remain visible.

The state of Washington is visible.

The aggregated totals for the ALL Level and Region attributes include only the values for members that are visible.

You need to ensure that the database role has these security settings.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Set the Region attribute's IsAllowed = False, DeniedSet = "Except(Region..Members,{West})", ApplyDenied = False, and VisualTools = False.
- B. Set the State attribute's IsAllowed = True, AllowedSet = "Except(Region..Members,{West} + {Washington})", ApplyDenied = False, and VisualTools = False.
- C. Set the Region attribute's IsAllowed = True, DeniedSet = "Except(Region..Members,{West})", ApplyDenied = False, and VisualTools = True.
- D. Set the State attribute's IsAllowed = True, AllowedSet = "Except(Region..Members,{West})", ApplyDenied = True, and VisualTools = False.

Answer: B,C
