Answer: C

NEW QUESTION: 2
DRAG DROP

Answer:
Explanation:

NEW QUESTION: 3
Your network contains an Active Directory domain named contoso.com.
The domain contains an enterprise certification authority (CA). You need to deploy certificates based on Version 1 templates to all of the computers in the domain. The solution must minimize administrative effort.
You create a Group Policy object (GPO) named GPO1 and link the GPO to the domain.
What should you do next?
A. In GPO1, configure Software installation.
B. Duplicate the templates. In GPO1, configure Software installation.
C. In GPO1, configure Automatic Certificate Request Settings.
D. In GPO1, configure Certificate Services Client - Certificate Enrollment Policy.

Answer: C
Explanation:
Automatic certificate request settings Certificate enrollment is the process of requesting, receiving, and installing a certificate. By using automatic certificate settings in public

key policies, you can have computers that are associated with a Group Policy object (GPO) automatically enroll for certificates. This can save you the step of explicitly enrolling for computer-related certificates for each computer. After you establish an automatic certificate request, the actual certificate requests occur the next time the computers associated with the GPO log on to the network.

NEW QUESTION: 4

You are creating a SharePoint site that will be accessed from the following devices:

Client computers

Windows Phone devices

Windows 8 RT devices You need to optimize the SharePoint experience for the listed devices.

What should you configure?

- A. Image renditions
- B. Device channels
- C. Variations
- D. Custom list views
- E. Design Manager

Answer: B
