F. Reduced virtual memory utilization

Answer: A,E,F
Explanation:
* Multiprocess and Multithreaded Oracle Database Systems
Multiprocess Oracle Database (also called multiuser Oracle
Database) uses several processes to run different parts of the
Oracle Database code and additional Oracle processes for the
users-either one process for each connected user or one or more
processes shared by multiple users. Most databases are
multiuser because a primary advantage of a database is managing
data needed by multiple users simultaneously.
Each process in a database instance performs a specific job. By
dividing the work of the database and applications into several
processes, multiple users and applications can connect to an
instance simultaneously while the system gives good
performance.
* In previous releases, Oracle processes did not run as threads
on UNIX and Linux systems. Starting in Oracle Database 12c, the
multithreaded Oracle Database model enables Oracle processes to
execute as operating system threads in separate address spaces.
