- Answer: C,D,E**

NEW QUESTION: 2

You are planning the migration of SQL01 to an Azure virtual machine.

You need to identify which service tier to use for the virtual machine. The solution must meet the business goals and the technical requirements.

Which virtual machine service tier should you identify?

- A. Standard A7
- B. Standard G2
- C. Standard DS13
- D. Standard D3

Answer: C

Explanation:

Topic 4, Relecloud

Overview

General overview

Relecloud is an international data services company that has 3,000 users. The company has a sales department a marketing department a research department and a human resources department.

Physical location

Relecloud has one office in Seattle. The company has customers through out North America and Europe.

Relecloud has most of its computing infrastructure located in a datacenter in Los Angeles. The company also has a few servers that are configured as Microsoft Azure virtual machines.

Existing Environment

Active Directory

The network contains an active Directory forest named relecloud.com. The forest contains two domains named relecloud.com and relecloud local. The functional level of the domain is Windows Server 2008 R2.

Each office contains five domain controllers. Each office is configured as an Active Directory site.

Current business model

Relecloud maintains a single Microsoft SQL Server database named Database 1. Database 1 hosts all of the data for the customers of Relecloud. Database 1 has a total of 600 GB of data.

Relecloud provides data for its customers by using several methods of delivery. such as comma-separated value (CSV) files and fixed-width text files. All of the files are delivered by using file Transfer protocol (FTP) or Secure FTP (SFTP).

The SQL Server environment contains two on-premises servers and

one server in the Azure region of US West. The Azure of US West, The Azure infrastructure contains an ExpressRoute connection.

The network contains the SQL server configured as shown in the following table.

ServerDB1 and Server DB2 are members of an availability group.
Problem statements

Relecloud identifies several issues with its current data storage model. Multiple customers report that they have issues loading files into relational databases. Additionally, Relecloud administrators often fail to communicate with the FTP servers of the Relecloud customers.

Currently, the memory and the CPU of ServerDB1 and ServerDB2 are nearly fully utilized.

Requirements

Business goals

Relecloud plans to take a leadership role in its industry and modernize its delivery method. The company also plans to offer its customers easier access to its data.

Planned changes

Relecloud plans to move all of its customers to a delivery model that uses Azure SQL Database and plans to maintain a single database for each customer.

Relecloud plans to automate the process of creating the required infrastructure for each new customers is approximately 10 GB and has a static size. The new customers require a rapid response time to database queries and each customer has five to concurrent logins.

Security requirements

Relecloud identifies the following security requirements:

Customers must be able to read data only.

Customers must be able to create custom views.

Customers must be able to use two-factor authentication when accessing Azure SQL databases.

Technical requirements

Relecloud identifies the following technical requirements:

Database administrators must be notified when the CPU pressure of AzD801 must be able to respond to customer requests for data.

Auditing requirements:

All of the requests from the stored procedures that are run against the Azure SQL databases must be logged.

All auditing information must be viewable in Microsoft Excel in Real-time.
