NEW QUESTION: 1

You are working in a computer forensic lab. A law enforcement investigator brings you a computer and a valid search warrant. You have legal authority to search the computer. The investigator hands you a piece of paper that has three printed checks on it. All three checks have the same check and account number. You image the suspect computer and open the evidence file with EnCase. You checks have the same check and account number. You image the suspect? computer and open the evidence file with EnCase. You perform a text search for the account number and check number. Nothing returns on the search results. You perform a text search for all other information found on the printed checks and there is still nothing returned in the search results. You run a signature analysis and check the gallery. You cannot locate any graphical copies of the printed checks in the gallery. At this point, is it safe to say that the checks are not located on the suspect computer? checks are not located on the suspect? computer?

- A. No. The images could be located a compressed file.
- B. No. The images could be in unallocated clusters.
- C. All of the above.
- D. No. The images could be embedded in a document.

E. No. The images could be in an image format not viewable inside EnCase.

Answer: C

NEW QUESTION: 2

Where do the statements available in the Writing Assistant for the competency evaluation originate? Please choose the correct answer.

- A.** In "Performance Details" within each individual competency
- B.** In the competency description in the "Objective Library"
- C.** In "Company Settings" in Admin Center
- D.** In "Families and Roles" within each individual role

Answer: A

NEW QUESTION: 3

R1 router clock is synchronized with ISP router. R2 is supposed to receive NTP updates from R1. But you observe that R2 clock is not synchronized with R1. What is the reason R2 is not receiving NTP updates from R1?

- A.** The NTP server command not configured on R2 router.
- B.** The IP address that is used in the NTP configuration on R2 router is incorrect.
- C.** R1 router Ethernet interface that is connected to R2 is placed in shutdown condition.
- D.** R2 router Ethernet interface that is connected to R1 is placed in shutdown condition.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

First we should verify if the ports connected between R1 and R2 is in "up/up" state with the "show ip interface brief" command

on R1 & R2.

Note: We learn R1 & R2 connect to each other via E0/2 interface because the IP addresses of these interfaces belong to 192.168.10.0/30 subnet. Both of them are "up/up" so the link connecting between R1 & R2 is good.

Next we need to verify the ntp configuration on R2 with the "show running-config" command:

So there is only one command related to NTP configuration on R2 so we need to check if the IP address of 192.168.100.1 is correct or not. But from the "show ip interface brief" command on R1 we don't see this IP -> This IP address is not correct. It should be 192.168.10.1 (IP address of interface E0/2 of R1), not 192.168.100.1.
