NEW QUESTION: 3
Your network contains an Active Directory domain named
adatum.com. The domain contains a server named Server1 that
runs Windows Server 2012 R2. Server1 is configured as a Network
Policy Server (NPS) server and as a DHCP server.
The network contains two subnets named Subnet1 and Subnet2.
Server1 has a DHCP scope for each subnet.
You need to ensure that noncompliant computers on Subnet1
receive different network policies than noncompliant computers
on Subnet2.
Which two settings should you configure? (Each correct answer
presents part of the solution. Choose two.)
A. The MS-Service Class conditions

B. The NAS Port Type constraints
C. The Called Station ID constraints
D. The NAP-Capable Computers conditions
E. The Health Policies conditions
Answer: A,D
Explanation:
C: The NAP health policy server uses the NPS role service with configured health policies and system health validators (SHVs) to evaluate client health based on administrator-defined requirements. Based on results of this evaluation, NPS instructs the DHCP server to provide full access to compliant NAP client computers and to restrict access to client computers that are noncompliant with health requirements.
D: If policies are filtered by DHCP scope, then MS-Service Class is configured in policy conditions.
