To improve the accuracy of the HPE6-A78 guide preparations, they keep up with the trend closely, So you needn't worry about you will encounter the great difficulties when you use our HPE6-A78 test pdf.

**Answer: A**

**NEW QUESTION: 2**

Your network contains an Active Directory domain named contoso.com. The domain contains two member servers named Server1 and Server2. All servers run Windows Server 2012 R2. Server1 and Server2 have the Failover Clustering feature installed. The servers are configured as nodes in a failover cluster named Cluster1. Cluster1 contains a cluster disk resource.

A developer creates an application named App1. App1 is NOT a cluster-aware application. App1 runs as a service. App1 stores data on the cluster disk resource.

You need to ensure that App1 runs in Cluster1. The solution must minimize development effort.

Which cmdlet should you run?

- A. Add-ClusterScaleOutFileServerRole
- B. Add-ClusterGenericApplicationRole
- C. Add-ClusterGenericServiceRole
- D. Add-ClusterServerRole

**Answer: B**

Explanation:

Add-ClusterGenericApplicationRole

Configure high availability for an application that was not originally designed to run in a failover cluster.

If you run an application as a Generic Application, the cluster software will start the application, then periodically query the operating system to see whether the application appears to be running. If so, it is presumed to be online, and will not be restarted or failed over.

EXAMPLE 1 -

Command Prompt: C:\PS>

```
Add-ClusterGenericApplicationRole -CommandLine
```

```
NewApplication.exe
```

```
Name OwnerNode State
```

```
cluster1GenApp node2 Online Description
```

This command configures NewApplication.exe as a generic clustered application. A default name will be used for client access and this application requires no storage.

**NEW QUESTION: 3**

Which statement about CRL configuration is correct?

- A. The Cisco ASA relies on HTTPS access to procure the CRL list.

- B. The Cisco Secure ACS can be configured as the CRL server.
- C. CRL checking is enabled by default.
- D. The Cisco ASA relies on LDAP access to procure the CRL list.

**Answer: D**

Explanation:

Explanation

ASA SSLVPN deployment guide:

The security appliance supports various authentication methods: RSA one-time passwords, Radius, Kerberos, LDAP, NT Domain, TACACS, Local/Internal, digital certificates, and a combination of both authentication and certificates.
