What is storage latency?

- A. The time required for a system to process a storage transaction.
- B. The minimum bandwidth provided by an iSCSI initiator.
- C. The maximum bandwidth provided by a Fiber Channel switch.
- D. The level of availability in a storage sub-system

Answer: A

Explanation:

Explanation

Latency is a measure of the time required for a sub-system or a component in that sub-system to process a single storage transaction or data request. It's akin to the propagation delay of a signal through a discrete component and is typically a function of hardware. For storage subsystems, latency refers to how long it takes for a single data request to be received and the right data found and accessed from the storage media.
