We will send DMI PDDSP questions and answers to your email in

10 minutes in our working time and no less than 12 hours in our off time.

NEW QUESTION: 1

Your network contains an Active Directory domain named contoso.com. The physical topology of the network is configured as shown in the exhibit. Each office contains 500 employees. You plan to deploy several domain controllers to each office. You need to recommend a site topology for the planned deployment.

What should you include in the recommendation?

More than one answer choice may achieve the goal. Select the BEST answer.

Exhibit

- A. Three sites and three site links
- B. One site
- C. Five sites and three site links
- D. Five sites and one site link

Answer: C

Explanation:

Create a site for each LAN, or set of LANs, that are connected by a high speed backbone, and assign the site a name.

Connectivity within the site must be reliable and always available. This would mean 5 sites Site links are transitive, so if site A is connected to site B, and site B is connected to site C, then the KCC assumes that domain controllers in site A can communicate with domain controllers in site C.

You only need to create a site link between site A and site C if there is in fact a distinct network connection between those two sites. This would mean 3 sitelinks So answer is "Five sites and three site links"

NEW QUESTION: 2

In discretionary access environments, which of the following entities is authorized to grant information access to other people?

- A. Manager
- B. Group Leader
- C. Data Owner
- D. Security Manager

Answer: C

Explanation:

Explanation/Reference:

In Discretionary Access Control (DAC) environments, the user who creates a file is also considered the owner and has full control over the file including the ability to set permissions for that file.

The following answers are incorrect:

manager. Is incorrect because in Discretionary Access Control (DAC) environments it is the owner/user that is authorized to grant information access to other people.

group leader. Is incorrect because in Discretionary Access Control (DAC) environments it is the owner/ user that is authorized to grant information access to other people.

security manager. Is incorrect because in Discretionary Access Control (DAC) environments it is the owner/user that is authorized to grant information access to other people.

IMPORTANT NOTE:

The term Data Owner is also used within Classifications as well. Under the subject of classification the Data Owner is a person from management who has been entrusted with a data set that belongs to the company. For example it could be the Chief Financial Officer (CFO) who is entrusted with all of the financial data for a company. As such the CFO would determine the classification of the financial data and who can access as well. The Data Owner would then tell the Data Custodian (a technical person) what the classification and need to know is on the specific set of data.

The term Data Owner under DAC simply means whoever created the file and as the creator of the file the owner has full access and can grant access to other subjects based on their identity.

NEW QUESTION: 3

When integrating with a Cisco Conductor, a Cisco TelePresence Server must be configured in which mode?

- A. locally managed mode
