NEW QUESTION: 1
Which two statements about the Cisco AnyConnect client Trusted Network Detection feature are true? (Choose two.)
A. If an attacker knows the DNS server value that is configured in the Cisco AnyConnect profile and provisions the
DHCP server to return both a real and spoofed value, then Cisco AnyConnect considers the endpoint to be in an
untrusted network.
B. The feature does not provide AnyConnect ability to automatically establish VPN connection when the user is outside the trusted network.
C. An attacker can theoretically host a malicious DHCP server and return data that triggers the client to believe that it resides in a trusted network.
D. The feature relies only on the DNS server list to detect whether the client machine is in a trusted or untrusted network.
Answer: A,C
