Answer :

Explanation:

Explanation

Box 1: Use Windows authentication
Windows authentication is usually the best choice in the following situations:
There is a domain controller.
The application and the database are on the same computer.
You are using an instance of SQL Server Express or LocalDB.
Box 2: Database application role
An application role is a database principal that enables an application to run with its own, user-like permissions. You can use application roles to enable access to specific data to only those users who connect through a particular application.
Box 3: Select/Insert
The web application must be permitted to display records and add records to the database.
