- A. 56MHz
- B. 5GHz
- C. 900MHz
- D. 2.4 GHz

**Answer: B**

**NEW QUESTION: 3**

Your company uses Public folders and Web Distributed Authoring and Versioning. The company asks you to install Microsoft Windows SharePoint Services (WSS) as a server in a new server farm. You plan to install WSS on a server that runs Windows Server 2008 R2.

You start the Configuration Wizard to begin the installation. You receive an error message as shown in the exhibit.

You need to configure WSS to start SharePoint Services 3.0 SP 2 Central Administration.

What should you do?

- A. Install the Active Directory Lightweight Directory Services role.
- B. Install the Windows Internal Database.
- C. Install the Active Directory Rights Management Services role.
- D. Install a Microsoft SQL Server 2005 server.

**Answer: D**

Explanation:

To resolve this problem, you need to install Microsoft SQL Server 2005 server on the farm. This error message occurs when either the SQL Server does not exist or the SQL Server services id stopped.

The server farm account is used to access your configuration database. It also acts as the application pool identity for the SharePoint Central Administration application pool, and it is the account under which the Windows SharePoint Services Timer

service runs. The SharePoint Products and Technologies Configuration Wizard adds this account to the SQL Server Logins, the SQL Server Database Creator server role, and the SQL Server Security Administrators server role. If SQL Server is not available then the above mentioned error message will appear.

Reference: Configuration Wizard - Failed to Connect

<http://blogs.msdn.com/neilth/archive/2008/04/25/failed-to-connect-or-database-name-does-not-exist.aspx>
