- B. ãfœãf¼ãf«ãf^
- C. Terratest
- D. Node.js
- E. ãf"ãf¼ãfžãf³

**Answer: C, E**

Explanation:  
Explanation

You can use the combination of Terraform and Yeoman. Terraform is a tool for creating infrastructure on Azure. Yeoman makes it easy to create Terraform modules.

Terratest provides a collection of helper functions and patterns for common infrastructure testing tasks, like making HTTP requests and using SSH to access a specific virtual machine. The following list describes some of the major advantages of using Terratest:

- \* Convenient helpers to check infrastructure - This feature is useful when you want to verify your real infrastructure in the real environment.
- \* Organized folder structure - Your test cases are organized clearly and follow the standard Terraform module folder structure.
- \* Test cases are written in Go - Many developers who use Terraform are Go developers. If you're a Go developer, you don't have to learn another programming language to use Terratest.
- \* Extensible infrastructure - You can extend additional functions on top of Terratest, including Azure-specific features.
