Answer: A

NEW QUESTION: 2

Ein IS-PrÃ¼fer, der die Implementierung eines Intrusion Detection-Systems (IDS) Ã¼berprÃ¼ft, sollte sich am meisten Sorgen machen, wenn:

- A. Ein verhaltensbasiertes IDS verursacht viele Fehllarme.
- B. Ein signaturbasiertes IDS ist schwach gegen neue Arten von Angriffen.
- C. Das IDS wird zum Erkennen von verschlÃ¼sseltem Datenverkehr verwendet.
- D. IDS-Sensoren befinden sich auÃerhalb der Firewall.

Answer: C

Explanation:

ErlÃuterung:

Ein Intrusion Detection System (IDS) kann keine Angriffe im verschlÃ¼sselten Datenverkehr erkennen. Es ist daher bedenklich, wenn jemand falsch informiert wurde und der Meinung ist, dass das IDS Angriffe im verschlÃ¼sselten Datenverkehr erkennen kÃ¶nnte. Eine Organisation kann Sensoren auÃerhalb der Firewall platzieren, um Angriffe zu erkennen. Diese Sensoren werden in hochsensiblen Bereichen und in Extranets platziert. Das Verursachen vieler Fehllarme ist fÃ¼r ein verhaltensbasiertes IDS normal und sollte kein Problem darstellen. Von einem signaturbasierten IDS wird auch erwartet, dass es gegen neue Arten von Angriffen schwach ist, da es nur zuvor identifizierte Angriffe erkennen kann.

NEW QUESTION: 3

You have a RADIUS server named RADIUS1. RADIUS1 is configured to use an IP address of 172.23.100.101.

You add a wireless access point (wap) named WAP-Secure to your network. You configure WAP-Secure to use an IP address of 10.0.100.101.

You need to ensure that WAP-Secure can authenticate to RADIUS1 by using a shared secret key.

What command should you run? To answer, select the appropriate options in answer area.

Answer:
