ProductCategoryName and ProductName.

Solution: You create a measure that uses the ISCROSSFILTERED DAX function Does this meet the goal?

- A. No
- B. Yes

Answer: A

NEW QUESTION: 4

Which of the following is a valid RADIUS attribute name?

- A. radius-attribute
- B. radius-attribute-id
- C. radius-attribute-name
- D. radius-attribute-value

Answer: D

Explanation:

Explanation

http://www.cisco.com/en/US/tech/tk59/technologies_tech_note09186a0080094e99.shtml Authentication and Authorization RADIUS combines authentication and authorization. The access-accept packets sent by the RADIUS server to the client contain authorization information. This makes it difficult to decouple authentication and authorization.

TACACS+ uses the AAA architecture, which separates AAA. This allows separate authentication solutions that can still use TACACS+ for authorization and accounting. For example, with TACACS+, it is possible to use Kerberos authentication and TACACS+ authorization and accounting. After a NAS authenticates on a Kerberos server, it requests authorization information from a TACACS+ server without having to re-authenticate. The NAS informs the TACACS+ server that it has successfully authenticated on a Kerberos server, and the server then provides authorization information.

During a session, if additional authorization checking is needed, the access server checks with a TACACS+ server to determine if the user is granted permission to use a particular command. This provides greater control over the commands that can be executed on the access server while decoupling from the authentication mechanism.
