**NEW QUESTION: 1**

You have a server named Server1 that runs Windows Server 2012 R2.

You have a subscription to Windows Azure.

You need to register the Microsoft Azure Backup Agent on Server1.

What should you do first?

- A. Create Site Recovery vault.
- B. Configure a passphrase for the Azure Backup Agent.
- C. Install the Microsoft System Center 2012 Data Protection Manager (DPM) agent.
- D. Create a backup vault.

**Answer: D**

Explanation:

Explanation/Reference:

To back up files and data from your Windows Server to Azure, you must create a backup vault in the geographic region where you want to store the data. The main steps include:

- \* the creation of the vault you will use to store backups
- \* downloading a vault credential
- \* the installation of a backup agent

Reference: Configure Azure Backup to quickly and easily back up Windows Server

<https://azure.microsoft.com/sv-se/documentation/articles/backup-configure-vault/>

**Answer: D,E**

Explanation:

Virtual Machine Scale Sets can be used with the Azure Desired

State Configuration (DSC) extension handler. Virtual machine scale sets provide a way to deploy and manage large numbers of virtual machines, and can elastically scale in and out in response to load. DSC is used to configure the VMs as they come online so they are running the production software.

### **NEW QUESTION: 3**

You want to add a new GUID column named ProductGUID to a table named dbo.Product that already contains data.

ProductGUID will have a constraint to ensure that it always has a value when new rows are inserted into dbo.Product.

You need to ensure that the new column is assigned a GUID for existing rows.

Which four Transact-SQL statements should you use to develop the solution? (To answer, move the appropriate Transact-SQL segments from the list of SQL-segments to the answer area and arrange them in the correct order.)

**Answer:**

Explanation:

Explanation

Box 1:

Existing BookGuid can be null.

Box 2:

Box 3: new()

Generate a new global value

Box 4:

Actually, in the real world, you don't have to use WITH VALUES at the end of the statement and it works just as well. But because the question specifically states which FOUR TSQL statements to use, we have to include it.

References:

### **NEW QUESTION: 4**

A technician needs to securely delete all data from a hard drive containing highly sensitive information. Which of the following is the BEST way to delete the data?

A. Low-level format

B. Delete the partition and re-format

C. Standard format

D. Manually select and delete the data within the OS

**Answer: A**
