NEW QUESTION: 1

Which of the following is true regarding IP drift in the Huawei Oceanstor V3 storage system?

- A.** If binding port A and physical port B join a unified VLAN, as long as there is a physical port in bonded port A, the service will switch to Physical Port B
- B.** When the IP drift mode is set to "Manual", when the port is restored, and the active port link is in a normal state for more than one minute, the system can cut back the service to the main port.
- C.** If Ethernet ports A and B are added to VLAN 2, by default the ports A and B data are in the same drift group
- D.** One Ethernet port can create multiple logical ports

Answer: B

NEW QUESTION: 2

If the primary Experience Portal Manager (EPM) server is unavailable, which component can handle Application Interface web service and Application Logging web service requests?

- A. Auxiliary Media Processing Platform
- B. Auxiliary Session Manager
- C. Secondary Media Processing Platform
- D. Auxiliary Experience Portal Manager

Answer: C

NEW QUESTION: 3

Your company has a main office. The main office is located in a building that has 10 floors.

A datacenter on the ground floor contains a Windows Server 2012 failover cluster. The failover cluster contains a DHCP server resource named DHCP1. All client computers receive their IP addresses from DHCP1. All client computers are part of the 131.107.0.0/16 IPv4 subnet.

You plan to implement changes to the network subnets to include a separate subnet for each floor of the office building. The subnets will connect by using routers.

You need to recommend changes to the DHCP infrastructure to ensure that all of the client computers can receive their IP configuration by using DHCP.

What should you recommend?

More than one answer choice may achieve the goal. Select the BEST answer.

- A. Configure each router to forward requests for IP addresses to DHCP1. Create a scope for the 10.0.0.0/16 subnet on DHCP1.
- B. Configure each router to forward requests for IP addresses to DHCP1. Create a scope for each subnet on DHCP1.
- C. Install a DHCP server on each floor. Create a scope for the local subnet on each new DHCP server. Enable DHCP Failover on each new DHCP server.
- D. Install a remote access server on each floor. Configure a DHCP relay agent on each new DHCP server. Create a scope for each subnet on DHCP1.

Answer: B

Excerpt: In TCP/IP networking, routers are used to interconnect hardware and software used on different physical network segments called subnets and forward IP packets between each of the subnets. To support and use DHCP service across multiple subnets, routers connecting each subnet should comply with DHCP/ BOOTP relay agent capabilities described in RFC 1542.
