**NEW QUESTION: 2**

Which MirrorView data state indicates that mirroring has been stopped and a write intent or fracture log is needed to continue mirroring?

- A. Rolling back
- B. Out of Sync
- C. Consistent
- D. Inactive

**Answer: C**

**NEW QUESTION: 3**

- A. Option B
- B. Option D
- C. Option C
- D. Option A

**Answer: D**

Explanation:

A user can create a subnet with VPC and launch instances inside that subnet. If the user has created a public private subnet to host the web server and DB server respectively, the user should configure that the instances in the public subnet can receive inbound traffic directly from the internet. Thus, the user should configure port 80 with source 0.0.0.0/0 in InBound. The user should configure that the instance in the public subnet can send traffic to the private subnet instances on the DB port. Thus, the user should configure the DB security group of the private subnet (DbSecGrp) as the destination for port 3306 in Outbound.
