As in this case, why not learning the most popular IT skills and gaining the RedHat Red Hat Certified Architect (RHCA) certificate, Because of our excellent EX447 exam questions, your passing rate is much higher than other candidates.

**NEW QUESTION: 1**

Your application stores sensitive information on an EBS volume attached to your EC2 instance. How can you protect your information? Choose two answers from the options given below

- A.** Copy the unencrypted snapshot and check the box to encrypt the new snapshot. Volumes restored from this encrypted snapshot will also be encrypted.
- B.** It is not possible to encrypt an EBS volume, you must use a lifecycle policy to transfer data to S3 for encryption.
- C.** Unmount the EBS volume, take a snapshot and encrypt the snapshot. Re-mount the Amazon EBS volume
- D.** Create and mount a new, encrypted Amazon EBS volume. Move

the data to the new volume. Delete the old Amazon EBS volume \*t

**Answer: A,D**

Explanation:

These steps are given in the AWS documentation

To migrate data between encrypted and unencrypted volumes

1) Create your destination volume (encrypted or unencrypted, depending on your need).

2) Attach the destination volume to the instance that hosts the data to migrate.

3) Make the destination volume available by following the procedures in Making an Amazon EBS Volume Available for Use.

For Linux instances, you can create a mount point at /mnt/destination and mount the destination volume there.

4) Copy the data from your source directory to the destination volume. It may be most convenient to use a bulk-copy utility for this.

To encrypt a volume's data by means of snapshot copying

1) Create a snapshot of your unencrypted CBS volume. This snapshot is also unencrypted.

2) Copy the snapshot while applying encryption parameters. The resulting target snapshot is encrypted.

3) Restore the encrypted snapshot to a new volume, which is also encrypted.

For more information on EBS Encryption, please refer to the below document link: from AWS

<http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/EBSEncryption.html>

### **NEW QUESTION: 2**

A technician wants to physically connect two office buildings' networks. The office buildings are located

600ft (183m) apart. Which of the following cable types is the BEST choice?
