Answer: C
Explanation:
Explanation
A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. A user can create a subnet with VPC and launch instances inside the subnet. The user can create a subnet with the same size of VPC. However, he cannot create any other subnet since the CIDR of the second subnet will conflict with the first subnet. The user cannot modify the CIDR of a subnet once it is created. Thus, in this case if required, the user has to delete the subnet and create new subnets.
http://docs.aws.amazon.com/AmazonVPC/latest/UserGuide/VPC_Subnets.html

NEW QUESTION: 4
According to the PMI, which of the following best describes
"phase exists"?
A. Schedule compression by starting a new task/ phase prior to
completing the current project tasks.
B. Reviews at the conclusion of a project phase to determine
whether the project should continue
