NEW QUESTION: 3
CORRECT TEXT
The Secure-X company has recently successfully tested the
802.1X authentication deployment using the Cisco Catalyst
switch and the Cisco ISEv1.2 appliance. Currently, each
employee desktop is connected to an 802.1X enabled switch port
and is able to use the Cisco AnyConnect NAM 802.1Xsupplicantto
log in and connect to the network.
Currently, a new testing requirement is to add a network
printer to the Fa0/19 switch port and have it connect to the
network. The network printer does not support 802.1X
supplicant. The Fa0/19 switch port is now configured to use
802.1X authentication only.
To support this network printer, the Fa0/19 switch port
configuration needs to be edited to enable the network printer
to authenticate using its MAC address. The network printer
should also be on VLAN 9.
Another network security engineer responsible for managing the
Cisco ISE has already per- configured all the requirements on
the Cisco ISE, including adding the network printer MAC address
to the Cisco ISE endpoint database and etc...
Your task in the simulation is to access the Cisco Catalyst
Switch console then use the CLI to:
 Enable only the Cisco Catalyst Switch Fa0/19 switch port to
authenticate the network printer using its MAC address and:
 Ensure that MAC address authentication processing is not
delayed until 802.1Xfails
 Ensure that even if MAC address authentication passes, the

switch will still perform 802.1X authentication if requested by a 802.1X supplicant
  Use the required show command to verify the MAC address authentication on the Fa0/19 is successful The switch enable password is Cisco For the purpose of the simulation, to test the network printer, assume the network printer will be unplugged then plugged back into the Fa0/19 switch port after you have finished the required configurations on the Fa0/19 switch port.
For this simulation, you will not need and do not have access to the ISE GUI To access the switch CLI, click the Switch icon in the topology diagram

Answer:
Explanation:
Review the explanation for full configuration and solution.
Explanation:
Initial configuration for fa 0/19 that is already done:

AAA configuration has already been done for us. We need to configure mac address bypass on this port to achieve the goal stated in the question. To do this we simply need to add this command under the interface:
mab
Then do a shut/no shut on the interface.
