Just taking one or two minutes, you can quickly receive the email about C-SAC-2114 valid training material and click the download link; you can download your C-SAC-2114 training material to review.

The sources and content of our C-SAC-2114 practice dumps are all based on the real C-SAC-2114 exam, Getting the C-SAC-2114 certification quickly seems to impossible to you.

The purchase procedures are safe and we protect our client's privacy.

#### **NEW QUESTION: 1**

An engineer needs to Implement a solution that prevents loops from occurring accidentally by connecting a switch to interface Ethern1/1. The port Is designated to be used tor host connectivity. What configuration should be implemented?

- A. Option C
- B. Option B
- C. Option D
- D. Option A

**Answer: A**

#### **NEW QUESTION: 2**

- A. Option A

- B. Option B
- C. Option D
- D. Option C

**Answer: A**

**NEW QUESTION: 3**

You need to recommend a solution for DHCP logging. The solution must meet the technical requirement.

What should you include in the recommendation?

- A. IP Address Management (IPAM)
- B. DHCP filtering
- C. Event subscriptions
- D. DHCP audit logging

**Answer: A**

Explanation:

\* Scenario: A central log of the IP address leases and the users associated to those leases must be created.

\* Feature description IPAM in Windows Server 2012 is a new built-in framework for discovering, monitoring, auditing, and managing the IP address space used on a corporate network. IPAM provides for administration and monitoring of servers running Dynamic Host Configuration Protocol (DHCP) and Domain Name Service (DNS). IPAM includes components for:

Automatic IP address infrastructure discover): IPAM discovers domain controllers, DHCP servers, and DNS servers in the domains you choose. You can enable or disable management of these servers by IPAM.

Custom IP address space display, reporting, and management: The display of IP addresses is highly customizable and detailed tracking and utilization data is available. IPv4 and IPv6 address space is organized into IP address blocks, IP address ranges, and individual IP addresses. IP addresses are assigned built-in or user-defined fields that can be used to further organize IP address space into hierarchical, logical groups.

Audit of server configuration changes and tracking of IP address usage: Operational events are displayed for the IPAM server and managed DHCP servers. IPAM also enables IP address tracking using DHCP lease events and user logon events collected from Network Policy Server (NPS), domain controllers, and DHCP servers. Tracking is available by IP address, client ID, host name, or user name.

Monitoring and management of DHCP and DNS services: IPAM enables automated service availability monitoring for Microsoft DHCP and DNS servers across the forest. DNS zone health is displayed, and detailed DHCP server and scope management is available using the IPAM console.

Reference: IP Address Management (IPAM) Overview You are evaluating the implementation of data deduplication on the planned Windows Server 2012 file servers.
