**NEW QUESTION: 1**

Wilhelm is writing a constructor in JavaScript. He uses the word "this" when referring to the properties and methods in his object parameters and functions. Why?

- A. Wilhelm's schema is not finalized yet, so he uses "this" as an empty placeholder in the code until the schema is set.
- B. The "this" keyword is used to represent the object as the properties and methods are defined.
- C. Wilhelm can reuse the object by substituting the word "this" for the real values, using a function to insert the real names.
- D. The word "this" has no significance outside of Wilhelm's script ?he chose this nomenclature randomly.

**Answer: B**

#### **NEW QUESTION: 3**

Your network contains an Active Directory domain named contoso.com.

The domain contains a server named Server1 that runs Windows Server 2016.

You need to prevent NTLM authentication on Server1.

Solution: From a Group Policy, you configure the Security Options.

Does this meet the goal?

- A. No
- B. Yes

**Answer: B**

#### **NEW QUESTION: 4**

Catalog Servers. Your domain structure contains one root domain and one child domain. You modify the folder permissions on a file server that is in the child domain. You discover that some Access Control entries start with S-1-5-21 and that no account

name is listed.

You need to list the account names. What should you do?

**A.** Move the RID master role in the child domain to a domain controller that does not hold the Global Catalog.

**B.** Modify the schema to enable replication of the friendly names attribute to the Global Catalog.

**C.** Move the infrastructure master role in the child domain to a domain controller that does not hold the Global Catalog.

**D.** Move the RID master role in the child domain to a domain controller that holds the Global Catalog.

**Answer: C**

Explanation:

If the IM Flexible Single Master Operation (FSMO) role holder is also a global catalog server, the phantom indexes are never created or updated on that domain controller. (The FSMO is also known as the operations master.) This behavior occurs because a global catalog server contains a partial replica of every object in Active Directory. The IM does not store phantom versions of the foreign objects because it already has a partial replica of the object in the local global catalog.

For this process to work correctly in a multidomain environment, the infrastructure FSMO role holder cannot be a global catalog server. Be aware that the first domain in the forest holds all five FSMO roles and is also a global catalog. Therefore, you must transfer either role to another computer as soon as another domain controller is installed in the domain if you plan to have multiple domains.
