NEW QUESTION: 1
A solutions architect is designing a high performance computing (HPC) workload on Amazon EC2 The EC2 instances need to communicate to each other frequently and require network performance with low latency and high throughput Which EC2 configuration meets these requirements'?
A. Launch the EC2 instances in a cluster placement group in one Availability Zone
B. Launch the EC2 instances in a spread placement group in one Availability Zone
C. Launch the EC2 instances in an Auto Scaling group spanning multiple Availability Zones
D. Launch the EC2 instances in an Auto Scaling group in two Regions and peer the VPCs
Answer: A
Explanation:
Explanation
Placement groups

When you launch a new EC2 instance, the EC2 service attempts to place the instance in such a way that all of your instances are spread out across underlying hardware to minimize correlated failures. You can use placement groups to influence the placement of a group of interdependent instances to meet the needs of your workload. Depending on the type of workload. Cluster - packs instances close together inside an Availability Zone. This strategy enables workloads to achieve the low-latency network performance necessary for tightly-coupled node-to-node communication that is typical of HPC applications. https://docs.aws.amazon.com/AWSEC2/latest/UserGuide/placement-groups.html

NEW QUESTION: 2
You develop Azure solutions.
A .NET application needs to receive a message each time an Azure virtual machine finishes processing dat a. The messages must NOT persist after being processed by the receiving application.
You need to implement the .NET object that will receive the messages.
Which object should you use?
A. TopicClient
B. CloudQueueClient
C. QueueClient
D. SubscriptionClient
Answer: B
Explanation:
A queue allows processing of a message by a single consumer.
Need a CloudQueueClient to access the Azure VM.

NEW QUESTION: 3
You are using infrared devices in your network. You want to improve the quality of
connections and achieve better communication between infrared devices. What will you do to achieve this? Each correct answer represents a complete solution. Choose three.
A. Remove any obstruction between the devices.
B. Keep the devices in different geographic locations.
C. Move the devices closer together.
D. Keep the devices in line of sight.
Answer: A,C,D
Explanation:
To improve the quality of your connections, keep the devices in line of sight so that they point directly at each other. Also, move the devices closer together and remove any obstruction

between the devices so that the signal transmitted by the devices can reach to the other devices. You can also verify that no other devices are interfering with the connection, because some household devices, like TV remotes, emit infrared signal that can interfere with your connection.
