**NEW QUESTION: 2**

Which two statements are true regarding the configuration of a Cisco switch? (Choose two.)

- A. The configuration command `spanning-tree mode rapid-pstp` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- B. The configuration command `spanning-tree mode rapid-pvst` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- C. The configuration command `spanning-tree mode rapid-pvst` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- D. The configuration command `spanning-tree mode rapid-pstp` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).

**Answer: D**

**NEW QUESTION: 3**

Which two statements are true regarding the configuration of a Cisco switch? (Choose two.)

- A. The configuration command `spanning-tree mode rapid-pstp` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- B. The configuration command `spanning-tree mode rapid-pvst` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- C. The configuration command `spanning-tree mode rapid-pvst` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).
- D. The configuration command `spanning-tree mode rapid-pstp` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP).

**Answer: A**

Explanation:

Cisco switches support two modes of Spanning Tree Protocol (STP): Rapid Spanning Tree Protocol (RSTP) and Per-VLAN Spanning Tree Protocol (PVST). RSTP is a faster version of STP that converges more quickly after a topology change. PVST is a Cisco-proprietary extension of STP that allows for multiple instances of STP to be run on a single switch, one for each VLAN. The configuration command `spanning-tree mode rapid-pstp` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP) for all VLANs. The configuration command `spanning-tree mode rapid-pvst` is used to configure the switch to use Rapid Spanning Tree Protocol (RSTP) for all VLANs.
