Answer: B,E
Explanation:
Option C is incorrect because Lambda functions is an incorrect
option to assign roles.
Option D is incorrect because IAM users are not directly mapped
to employees' corporate identities.

From the AWS Documentation, for federated access, you also need
to ensure the right policy permissions are in place Configure
permissions in AWS for your federated users The next step is to
create an IAM role that establishes a trust relationship
between IAM and your organization's IdP that identifies your
IdP as a principal (trusted entity) for purposes of federation.

The role also defines what users authenticated your organization's IdP are allowed to do in AWS. You can use the IAM console to create this role. When you create the trust policy that indicates who can assume the role, you specify the SAML provider that you created earlier in IAM along with one or more SAML attributes that a user must match to be allowed to assume the role. For example, you can specify that only users whose SAML eduPersonOrgDN value is ExampleOrg are allowed to sign in. The role wizard automatically adds a condition to test the saml:aud attribute to make sure that the role is assumed only for sign-in to the AWS Management Console. The trust policy for the role might look like this:

For more information on SAML federation, please refer to below URL:
https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_providers_enabli Note:
What directories can I use with AWS SSO?
You can connect AWS SSO to Microsoft Active Directory, running either on-premises or in the AWS Cloud. AWS SSO supports AWS Directory Service for Microsoft Active Directory, also known as AWS Managed Microsoft AD, and AD Connector. AWS SSO does not support Simple AD. See AWS Directory Service Getting Started to learn more.
To connect to your on-premises directory with AD Connector, you need the following:
VPC
Set up a VPC with the following:
* At least two subnets. Each of the subnets must be in a different Availability Zone.
* The VPC must be connected to your on-premises network through a virtual private network (VPN) connection or AWS Direct Connect.
* The VPC must have default hardware tenancy.

* https://aws.amazon.com/single-sign-on/faqs/
* https://aws.amazon.com/bloj using-corporate-credentials/
* https://docs.aws.amazon.com/directoryservice/latest/admin-
The correct answers are: Create a Direct Connect connection between on-premise network and AWS. Use an AD connector connecting AWS with on-premise active directory.. Create an IAM role that establishes a trust relationship between IAM and corporate directory identity provider (IdP) Submit your Feedback/Queries to our Experts
