NEW QUESTION: 1
Your network contains an Active Directory forest. The forest
contains one domain named contoso.com.
You discover the following event in the Event log of domain
controllers: "The request for a new accountidentifier pool
failed. The operation will be retried until the request
succeeds. The error is " %1 ""
You need to ensure that the domain controllers can acquire new
account-identifier pools successfully.
What should you do?
A. Deploy an additional global catalog server.
B. Move the PDC emulator role.
C. Move the infrastructure master role.
D. Move the domain naming master role.
E. Install a read-only domain controller (RODC).
F. Restart the Active Directory Domain Services (AD DS)
service.
G. Move the schema master role.
H. Move the global catalog server.
I. Move the RID master role.
J. Move the bridgehead server.
Answer: I
Explanation:
This error can occur when the server holding the RID master
role is not available to provide
a new RID pool.
Moving the RID master role to another domain controller will
resolve this.

Event ID 16651 – RID Pool Request
Users, computers, and groups stored in Active Directory are
collectively known as security
principals. Each security principal is assigned a unique
alphanumeric string called a SID.
The SID includes a domain prefix identifier that uniquely
identifies the domain and a
relative identifier (RID) that uniquely identifies the security
principal within the domain. The
RID is a monotonically increasing number at the end of the SID.
Each domain controller is
assigned a pool of RIDs from the global RID pool by the domain
controller that holds the
RID master role (also known as flexible single master
operations or FSMO) in each Active
Directory domain. The RID master (also known as the RID pool
manager, RID manager, or
RID operations master) is responsible for issuing a unique RID
pool to each domain
controller in its domain. By default, RID pools are obtained in
increments of 500. (...) Newly
promoted domain controllers must acquire a RID pool before they
can advertise their

availability to Active Directory clients or share the SYSVOL.
Existing domain controllers
require additional RID allocations in order to continue
creating security principals when
their current RID pool becomes depleted.
Event Details
Message
The request for a new account-identifier pool failed. The
operation will be retried until the
request succeeds.
The error is " %1 "
Resolve
Check connectivity to the RID master, and check its replication
status
A relative ID (RID) pool was not allocated to the local domain
controller. Ensure that the local domain controller can
communicate with the domain controller that is identified as
the RID operations master.
Ensure that the RID master is online and replicating to other
domain controllers.
