NEW QUESTION: 1

What is the combination of attributes that defines a test case execution record?

- A. name, state, action, and result
- B. test case, test script, state, and result
- C. test suite, test case, test script, and result
- D. test case, test plan, iteration, and test environment

Answer: D

NEW QUESTION: 2

An SLA contains the official requirements for contract performance and satisfaction between the cloud provider and cloud customer. Which of the following would NOT be a component with measurable metrics and requirements as part of an SLA?

- A. CPU
- B. Users
- C. Network
- D. Memory

Answer: B

Explanation:

Explanation

Dealing with users or user access would not be an appropriate item for inclusion in an SLA specifically.

However, user access and user experience would be covered indirectly through other metrics. Memory, CPU, and network resources are all typically included within an SLA for availability and response times when dealing with any incidents.

NEW QUESTION: 3

You are the Network Administrator at a large company. Your company has a lot of contractors and other outside parties that come in and out of the building. For this reason you are concerned that simply having usernames and passwords is not enough and want to have employees use tokens for authentication.

Which of the following is not an example of tokens?

- A. USB device with cryptographic data
- B. Smart card
- C. CHAP
- D. Key fob

Answer: C
