NEW QUESTION: 1

An application that you manage has several web front-end instances- Each web front end communicates with a set of back-end worker processes by using an Azure queue.

You are developing code for the worker processes.

You have a function named DoWork() that handles data processing tasks.

You need to develop code for the worker processes that meets the following requirements:

- * Properly access an item from the queue and be resistant to failure.
- * Run on multiple background processes.
- * Ensure that items are available to other workers two minutes after a worker process fails.
- * Ensure that messages regarding failed processes are logged to

the console.

How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each connect selection its worth one point

Answer:

Explanation:

NEW QUESTION: 2
