Are you looking for aPHRi exam study material with the help of which you can pass exam in your first attempt, As a thriving multinational company, we are always committed to solving the problem that our customers may have.

New aPHRi dumps pdf files and youtube demo update free shared, Our exam materials are aiming to allay your worry about exam.

NEW QUESTION: 1

What are three characteristics common to organizations trying to deliver software applications on a more continuous basis?

- A. release frequency is days/weeks
- B. planned delivery model
- C. small development teams
- D. continuous integration frequency

Answer: A,C,D

Explanation:

*Development and Operations Team Sizes

10s with built-in DevOps automation

*integration frequency:continuous

*Release Frequency

Days to Weeks, based on business opportunity

Incorrect:

Not A: Devops uses an incremental model, not a traditional

planned delivery model.

NEW QUESTION: 2

You work as an administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com. All servers in the Contoso.com domain, including domain controllers, have Windows Server 2012 R2 installed.

You have been instructed to make sure that Contoso.com users are not able to install a Windows Store application. You then create a rule for packaged apps.

Which of the following is the rule based on? (Choose all that apply.)

- A. The name of the application
- B. The publisher of the application.
- C. The application version.
- D. The publisher of the package.
- E. The name of the package
- F. The package version.

Answer: D,E,F

Explanation:

Explanation

Packaged apps (also known as Windows 8 apps) are new to Windows Server 2012 R2 and Windows 8.

They are based on the new app model that ensures that all the files within an app package share the same identity. Therefore, it is possible to control the entire application using a single AppLocker rule as opposed to the non-packaged apps where each file within the app could have a unique identity. Windows does not support unsigned packaged apps which implies all packaged apps must be signed.

AppLocker supports only publisher rules for Packaged apps.

A publisher rule for a Packaged app is based on the following information:

Publisher of the package

Package name

Package version

All the files within a package as well as the package installer share these attributes. Therefore, an AppLocker rule for a Packaged app controls both the installation as well as the running of the app. Otherwise, the publisher rules for Packaged apps are no different than the rest of the rule collections; they support exceptions, can be increased or decreased in scope, and can be assigned to users and groups.
