Refund We promise to you full refund if you failed the exam with NS0-162 test braindump, According to statistics, we get to know that most of people who want to take part in the exam are the office workers, while preparing for passing the exam without NS0-162 exam questions & answers: NetApp Certified Data Administrator, ONTAP is a time-consuming course, so in order to meet the demand of them, we have compiled all of the important knowledge points about the exam into our NS0-162 exam braindumps.

This is a professional-level certificate that recognizes your ability to serve in the role of a NS0-162 , tasked with leading and directing teams and projects.

Getting a professional Network Appliance certification with

NS0-162 test dumps is the first step beyond all questions.

NEW QUESTION: 1

The Data Loader can de-duplicate records during import.

- A. False
- B. True

Answer: A

NEW QUESTION: 2

Your customer wants to virtualize a third-party storage system behind an HUS VM. Where can you discover the external volumes?

- A. in the SVP Maintenance screen
- B. in the Storage Navigator Add External Volumes screen
- C. in the Hitachi Device Manager Add Subsystem screen
- D. in the External Volume Manager Virtualize Volumes screen

Answer: B

NEW QUESTION: 3

A technician, Joe, has been tasked with assigning two IP addresses to WAN interfaces on connected routers. In order to conserve address space, which of the following subnet masks should Joe use for this subnet?

- A. /29
- B. /28
- C. /24
- D. /32
- E. /30

Answer: E

Explanation:

An IPv4 address consists of 32 bits. The first x number of bits in the address is the network address and the remaining bits are used for the host addresses. The subnet mask defines how many bits form the network address and from that, we can calculate how many bits are used for the host addresses.

In this question, the /30 subnet mask dictates that the first 30 bits of the IP address are used for network addressing and the remaining 2 bits are used for host addressing. The formula to calculate the number of hosts in a subnet is $2^n - 2$. The "n" in the host's formula represents the number of bits used for host addressing. If we apply the formula $(2^2 - 2)$, a /30 subnet mask will provide 2 IP addresses.
