NEW QUESTION: 1

You plan to create a Power BI report. You have the schema model shown in the exhibit. (Click the exhibit).

The model has the following relationships:

- * Store to District based on DistrictID
- * Sales to Store based on LocationID
- * Sales to Date based on PeriodID
- * Sales to Item based on ItemID

You configure row-level security (RLS) so that the district managers of the stores only see the sales from the stores they manage.

When the district managers view the sales report, they see Sales by Items for all stores.

You need to ensure that the district managers can see Sales by items for the stores they manage only.

How should you configure the relationship from Sales to Item?

- A. Change the Cardinality to One to Many (1.*).
- B. Change the Cardinality to One to one (1:1).
- C. Change the Cross filter direction to Both.
- D. Select Assume Referential Integrity.

Answer: C

Explanation:

Explanation

NEW QUESTION: 2

Scenario: A company has a data model with the following relationships:
Sales to Store based on LocationID
Sales to Date based on PeriodID
Sales to Item based on ItemID
The company has a row-level security (RLS) policy that filters sales data based on the district manager's location. The policy is defined as follows:
[Sales].[Sales] <= [Sales].[LocationID] <= [Sales].[DistrictManagerLocation]

The company has a row-level security (RLS) policy that filters sales data based on the district manager's location. The policy is defined as follows:
[Sales].[Sales] <= [Sales].[LocationID] <= [Sales].[DistrictManagerLocation]

Answer:

Explanation:

Explanation

The text in the Policy Settings section of the exhibit explains what will happen.

If a user sends between 1 and 10 instances of the sensitive info (passport number), then a notification email and will be sent to the user and a policy tip will be displayed. The email will not be blocked though. Therefore, it will be allowed.

If a user sends more than 10 instances of the sensitive info (passport number), the email will be blocked and a high-severity alert generated. However, the user can override the block.
