NEW QUESTION: 2

Note: This question is a part of a series of questions that present the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

You have a Microsoft SQL Server database that contains the following tables.

The following columns contain data information:

- * Date[Month] in the mmyyyy format
- * Date[Date_ID] in the ddmmyyyy format
- * Date[Date_name] in the mm/dd/yyyy format
- * Monthly_returns[Month_ID] in the mmyyyy format

The Order table contains more than one million rows.

The Store table has relationship to the Monthly_returns table on the Store_ID column. This is the only relationship between the tables.

You plan to use Power BI desktop to create an analytics solution for the data.

End of repeated scenario.

You need to display the month as a three-letter abbreviation, followed by the year, such as jan2017.

You add a calculated column in Power BI.

Which DAX formula should you use for the calculated column? To answer, drag the appropriate values to the correct targets.

Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION: 3

An animation in your book page does not start in the preview. What are some possible reasons? Note:

There are 2 correct Answer to this question.

- A. In the parameter section of the animation object, the target object is not set.
- B. The animation duration is set to a value lower than 1.
- C. In the object list, the animation object is placed behind the animated object.
- D. The animation is triggered by a Time Control, but the Time Control is not started.

Answer: B,D

NEW QUESTION: 4

You need to design the system that alerts project managers to data changes in the contractor information app.

Which service should you use?

- A. Azure Queue Messaging
- B. Azure Mobile Service
- C. Azure Notification Hub
- D. Azure Service Bus Message Queuing

Answer: A

Explanation:

* Scenario:

/ Mobile Apps: Event-triggered alerts must be pushed to mobile apps by using a custom Node.js script.

/ The service level agreement (SLA) for the solution requires an uptime of 99.9%

* If you are already using Azure Storage Blobs or Tables and you start using queues, you are guaranteed 99.9% availability. If you use Blobs or Tables with Service Bus queues, you will have lower availability.

Note: Microsoft Azure supports two types of queue mechanisms: Azure Queues and

Service Bus Queues.

/ Azure Queues, which are part of the Azure storage infrastructure, feature a simple REST- based Get/Put/Peek interface, providing reliable, persistent messaging within and between services.

/ Service Bus queues are part of a broader Azure messaging infrastructure that supports queuing as well as publish/subscribe, Web service remoting, and integration patterns.
