A. ã•-ã•„

B. ã•„ã•„ã•^

Answer: B

Explanation:

Azure virtual machine scale sets let you create and manage a group of load balanced VMs. The number of VM instances can automatically increase or decrease in response to demand or a defined schedule. Scale sets provide high availability to your applications, and allow you to centrally manage, configure, and update many VMs.

Virtual machines in a scale set can be deployed across multiple update domains and fault domains to maximize availability and resilience to outages due to data center outages, and planned or unplanned maintenance events.

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/availability>

NEW QUESTION: 4

During a recent audit, several undocumented and unpatched devices were discovered on the internal network.

Which of the following can be done to prevent similar

occurrences?

- A. Configure the WAPs to use NAC and refuse connections that do not pass the health check
- B. Install DLP controls and prevent the use of USB drives on devices
- C. Run weekly vulnerability scans and remediate any missing patches on all company devices
- D. Implement rogue system detection and configure automated alerts for new devices

Answer: C
