After passing exam and obtaining IBM certification, you will have a good future, In order to live a better live, people improve themselves by furthering their study, as well as increase their professional C1000-127 skills.

NEW QUESTION: 1

You are developing an application that accepts the input of dates from the user.

Users enter the date in their local format. The date entered by the user is stored in a string variable named `inputDate`. The valid date value must be placed in a `DateTime` variable named `validatedDate`.

You need to validate the entered date and convert it to Coordinated Universal Time (UTC). The code must not cause an exception to be thrown.

Which code segment should you use?

- A. Option C
- B. Option D
- C. Option B
- D. Option A

Answer: D

Explanation:

Explanation/Reference:

Explanation:

`AdjustToUniversal` parses `s` and, if necessary, converts it to UTC.

Note: The `DateTime.TryParse` method converts the specified string representation of a date and time to its `DateTime` equivalent using the specified culture-specific format information and formatting style, and returns a value that indicates whether the conversion succeeded.

NEW QUESTION: 2

HOTSPOT You plan to deploy Lync Server 2013. The deployment will have two sites named `Site1` and `Site2`. `Site1` will contain the following components:

- One Persistent Chat Server pool that has compliance enabled
- Two Enterprise Edition Front End pools
- One Edge pool

`Site2` will contain the following components:

- One Enterprise Edition Front End pool
- One Standard Edition Front End pool
- One Edge pool

You need to identify the minimum number of SQL Server servers that must be

deployed to each site to support the planned Lync Server 2013

deployment. How many servers should you identify for each site? To answer, configure the appropriate number of SQL Server servers for each site in the answer area.

Answer:

Explanation:

Explanation:

Note:

* The Lync Server 2013 Central Management store holds user data for all Enterprise Edition servers within a pool, and is designed to be located on a SQL Server -based Back End Server. As a centralized repository, the Central Management store cannot be installed on the same computer as any other Lync Server 2013 role. The Central Management store cannot reside on an Enterprise Edition server in the pool. The Central Management store is created automatically when you publish the topology for the first time and select to create the databases. The computer that you designate as the Back End Server must already be running SQL Server database software in order for the installation to succeed.

NEW QUESTION: 3

A customer is not able to enter the RAID BIOS setup utility for an onboard controller. Which of the following troubleshooting steps should an [\[email protected\]](#) Server Specialist take when trying to resolve the customer's issue?

- A. Verify the SGPIO cable is connected.
