B. Option D

C. Option A

D. Option C

E. Option E

**Answer: E**

Explanation:

Manage Update and Automatic Approvals

The groups you created above can now be used to deploy Windows Intune Policies, software updates, and software packages. If you wish to closely manage all the updates that are managed by Windows Intune you can use the Updates workspace to Approve or Decline them. However, if you wish to ensure that critical or security updates are installed as quickly as possible on your managed PCs, you can use the Windows Intune auto-approval rules. The following steps will take you through the process of setting up an auto-approval rule that can be used to help

automate the process of approving updates of the classifications you select.

1. From the Windows Intune Administration Console click Administration and Updates.
  2. Select Automatic Approval Rules, scroll down to the bottom of the page, if required, and then click New....
  3. Type in a Rule name such as: "Default Approval Rule" then click Next.
  4. In Step 2 of 4, check the All Categories option and click Next.
  5. Now you can select the update classifications that you wish to automatically approve.
